Cryptomathic to Discuss Crypto-Agility and Present a New Solution for Qualified Trust Services at ISSE 2019

European Business Security and Society Challenges
6th and 7th November 2019; Brussels, Belgium

BRUSSELS, 16th SEPTEMBER 2019 - EEMA the leading independent European think tank focused on identity, privacy and trust, today announced the cloud security pioneer, Cryptomathic, will focus on crypto-agility and present a newly launched solution for qualified trust services at its ISSE 2019 (Information Security Solutions Europe) conference. For the second consecutive year, Cryptomathic will be Silver Sponsor of ISSE, which this year focuses on ‘European Business Security and Society Challenges’. ISSE 2019 takes place on 6th and 7th November 2019 at the IBM head-quarters in Brussels.

Over the past year, Cryptomathic has intensified its positioning in key management and crypto-agility. At ISSE 2019 the company will showcase its centralised cryptography management offering, which has been extended to unify and streamline cryptographic services across large organisations. The flagship solution, Crypto Service Gateway (CSG) delivers a centrally managed and highly resilient crypto service to address new and upcoming challenges for strong cryptography, including cloud migration, quantum technology and compliance requirements. In the eIDAS space, Cryptomathic confirms its leading position in remote signing and WYSIWYS and has recently launched a new app-based digital on-boarding solution for qualified trust services.

Managing Director at Cryptomathic GmbH, Guillaume Forget, comments: “The quality of the audience at the ISSE event combined with the insightful and compelling talks is a strong motivation for us to continue attending and sponsoring these conferences. This time, we will give a talk on crypto-agility and invite a partner of ours in the eIDAS space to present a newly launched solution for qualified trust services that combines automated client on-boarding with the facility for strong customer authentication as well as local and remote signing.”

Guillaume Forget will be joined on the ISSE agenda by cryptography experts Dr. Christiane Peters, Enterprise Security Architect at IBM, Belgium, and the world renowned Professor Bart Preneel of KU Leuven, who will deliver a ‘Cryptographic Year in Review’.
ISSE 2019 is organised by EEMA and hosted by IBM Security Benelux. The two-day conference will deliver a programme of world-class speakers taking part in keynote presentations, fire-side briefings and seminars, offering a truly independent perspective on the e-security market across Europe. Now in its 21st year, it attracts hundreds of professionals including industry experts, commercial end-users and government policy-makers.

About EEMA
Brussels-based, EEMA is the leading independent European think tank focusing on identification, authentication, privacy, risk management, cyber security, the Internet of Things and mobile applications. EEMA’s world class conferences provide the forum to network with digital enterprise experts, high level EC and other government experts. Meanwhile, its series of high-level fireside briefings in Brussels and London provide the ideal forum for industry leaders to tackle controversial hot topics in an intimate, invitation only setting.

Through collaboration with EU & Global Partners (including the creation and coordination of the European Trust Foundation), EEMA has established a growing network throughout Europe. This community provides the ideal platform to disseminate information and share expertise regarding the high-profile and significant EU projects EEMA is involved in.
